

## Rohos Logon Key

**Secure Windows Logon – easy-to-use two-factor authentication solution.**

**Rohos Logon Key converts any USB drive into a security token for your computer** and allows access Windows in a secure way by USB token. It works like a car key. Rohos Logon Key is a genuine authentication solution with complete password replacement, and not just a primitive PC lock like many other programs where you have to enter a password manually anyway.

### Secure Access to:

- Personal computer with Windows 2000 / XP / Vista / Seven.
- Windows 2000/ 2003/ 2008 Active Directory.
- Novell e-Directory. Full compatibility with Novell Client 4.81 (or higher)
- Windows 2003/2008 Remote Desktop
- Mac OS X 10.4/10.5 and 10.6

Now there are three widely spread Windows versions: 2000/ XP/ Vista. Each has different logon window and Rohos Logon seamlessly integrates in them.

Windows Vista / 2008 welcome screen

Mac OS X logon window

### Your Computer Security Benefits:

- **Replaces weak password based login** with a hardware USB key, thus you use big password without the need to remember it;
- **Emergency Logon** – helps to access computer in emergency case: USB key lost or damaged, forgotten PIN code, broken USB port;
- Computer is protected even in **Safe Mode**;
- **Use a single USB key** to securely log into your home laptop and office computer.
- **Two-factor authentication** by using PIN code for USB Key.

### USB Key Hardware Variety:

- any USB flash drive
- USB tokens/ smart cards like Aladdin eToken PRO, Futako HiToken v22, Aktiv ruToken, uaToken, Crypto Identity 5, etc
- YubiKey, Swekey and Umikey – one-time password tokens
- Fingerprint USB flash drive, e.g. Transcend, Apacer, LG, TakeMS, BioSlimDisk, etc.
- Wireless devices that are Bluetooth enabled, e.g. Pocket PC, Mobile
- Touchatag RFID

### USB Key Security

- **USB Key cannot be duplicated.** Logon profile is bound up with a USB flash drive serial number
- **USB Key originality.** By default USB Key is bound up with a computer where it was created for login. Computer owner can forbid to use any other USB Key except one for login
- **Protected password.** By default USB Key does not contain your Windows password in plain form, but only Encryption Key pair that is used to reconstruct password for login operation

**Rohos Logon Key** is available in two versions – Personal and PRO – allowing the end-user as well as the corporate one to choose the best two-factor authentication solution. Both versions support Windows 2000/XP/2003/Vista/2008. PRO version allows using Rohos Logon on 3 computers, having just a single USB key to access them. Also there is Server Version that allows Administrator to carry out numerous tasks in a network environment using USB Key Management Utility and Rohos Remote Config Utility. Rohos Logon Key Server Version benefits:

- Rohos Logon Key uses a single USB Key to login into multiple computers/user accounts;
- You can log into Remote Desktop login by USB key;
- Support for Novell Client for Windows;
- Support for Windows Active Directory.

**Rohos Logon Key Server version** is specially designed to deploy and use Rohos Logon within Windows Active Directory. It allows Administrator's carrying out the following tasks:

- Setting up and handout hundreds of USB Keys;
- Configuring USB Keys for the access to the remote desktop;
- Changing Rohos Logon settings and USB Key on any network workstation remotely.
- Licensing any number of computers and USB keys with no efforts.

**Rohos Logon Key Mac version** allows to use any USB flash drive with on-board serial number to be used as a security token. Rohos Logon does not store any information on USB flash drive, thus allowing to use even non-Mac compatible USB sticks. Security benefits:

- Mac is protected but you do not need to enter your password manually each time you unlock it;
- Automatically locks Mac screen when USB Key is been unplugged;
- Unlocking Mac with a USB token is fully automatic and fast;

Other Rohos Logon features:

- Support storage and management of multiple user profiles for logon on one USB Key.
- Auto-detect Windows logon configuration and integrates into it.
- Integrates into existing Windows 2000/2003 gina module on the server computer.
- Support Novell Client login window
- Support network password change policy.
- Support MSI installation package for Active Directory deployment
- Emergency login when USB key was lost
- Safe Mode protection
- Allow to disable password based login
- Unique USB Key protection features.
- Rohos Logon Key provides cross-platform security for Windows and Mac

#### **Rohos Logon Key system Requirements**

- Windows 2000/ XP/ 2003/ Vista /2008/ Seven (including x64 versions, AMD64/IA64) and Mac OS X 10.4/10.5 and 10.6
- Hard Disk – 1MB
- USB port – 2.0.
